

ICT and a support of the economical active life

Josef Myslín

Abstract: The article describes present demographic situation and tries to show that some changes in society and subsequently in social arrangement are necessary. As well it tries to show that ICT technologies could help do this changes. But, the ICT must not be use rash and unnecessarily. The article tries to show possibilities, which we have, but also identifies risk connected with implementation of modern information technologies.

Keywords: ICT technologies, pension, pension system, prolonging of economical active life
